DETAILED ACTION

Election/Restrictions

Claims 9 and 12 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a non-elected claim, there being no allowable generic or linking claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-7, 10-11 are rejected under 35 U.S.C. 102(e) as being anticipated by Majumdar et al ('051).

Majumdar teaches the following claimed limitations as cited below:

1. A heterojunction structure comprising a p-type semiconductor thin film (GaN or Si) and an n-type (Col.32, lines: 60-68- teaching that the core of the nanowire is n type and the sheath is p type which creates a heterojunction) ZnO-based nanorod (Col.15- lines: 35-41- teaching the core/sheath structure of the nanowire consists of GaN or Si and ZnO) epitaxially grown thereon (Col.29, lines: 10-20- teaching epitaxial growth of ZnO nanowires) (See also Col./8, lines:45-Col.9, lines: 5).

2. The heterojunction structure of claim 1, wherein the p-type semiconductor is made of a material having a band-gap energy ranging from 1.5 to 4.5 eV (inherent of the Group III-V materials listed).
3. The heterojunction structure of claim 2, wherein p-type semiconductor is made of a material selected from the group consisting of GaN, AlN, GaP, GaAs, ZnSe, CdSe, CdS, ZnS, SrCu, SiC and Si (Col.15, lines: 35-41).
4. The heterojunction structure of claim 1, wherein the p-type semiconductor thin film has a thickness ranging from 50 nm to 200 /nm (Col.29, lines: 35-45).
5. The heterojunction structure of claim 1, wherein the ZnO-based nanorod has a diameter in the range of 5 to 100 nm and a length in the range of 5 nm to 100 nm (Col.29, lines: 35-45).
6. The heterojunction structure of claim 1, wherein the ZnO-based nanorod is a ZnO nanorod or a heteromaterial-doped or coated ZnO-nanorod (Col.29, lines: 15-20).
7. The heterojunction structure of claim 6, wherein the heteromaterial is selected from the group consisting of Mg, Mn, Cd, Se and mixtures thereof (Col.15, lines:45-50).

10. A nano-device or an array thereof comprising the heterojunction structure of claim 1 (see rejection above).

11. A nano-system or an integrated circuit comprising the nano-device array of claim 10 (see rejection above).

Allowable Subject Matter

Claim 8 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
